Assignment 2 - ElearnDroid

ElearnDroid is an application designed to introduce users to basic android widgets. Upon installation, the user is presented with the option to create an account. After this account is created, it automatically logs in the user and keeps them logged in. A user who takes the quiz can record their last score. When 5 users are created, the user no longer has access to the create account screen.

Once logged in, a user sees their name and last score in the action bar to the top of the screen. On this screen, the user has the option to logout, choose from 1 of 8 short tutorials or take the 5-question multiple choice quiz.

If the user is already created but not logged in, a login option is presented on the MainActivity page. When the button is clicked, it takes the user to a page where they may select the appropriate user profile to login with.
